www.linkedin.com/in/yogita-yadav-42getai • https://github.com/yogita-0204

Objective

To secure a challenging role as a **Software Engineer or Data Analyst** where I can apply my skills in **machine learning, data analytics, and Web development** to build impactful solutions. I aim to contribute to data- driven and AI-based projects while continuously improving my technical expertise and delivering value to the organization.

Education

Lovely Professional University **Jalandhar, Punjab**
Bachelor of Technology in Computer Science and Engineering, CGPA: 7.42 *2027*
Relevant Coursework: Data Structures and Algorithms, Operating Systems, Database Management Systems, Artificial Intelligence, Computer Networks, Software Engineering

Children's Academy Convent School **Alwar, Rajasthan**
Senior Secondary School Certificate (12th Grade), Percentage: 81% *2022*
Key Subjects: Physics, Chemistry, Mathematics

Step By Step Public School **Alwar, Rajasthan**
Secondary School Certificate (10th Grade), Percentage: 90.2% *2020*

Technical Skills

Programming Languages: Python, C++, Java, SQL
Tools/Technologies: Power BI, Excel, GitHub
Operating Systems: Linux, Windows
Databases: MySQL / Relational Databases
Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Django, Tailwind CSS

Projects

Project Title: *College Shop Pre-Order & Crowd Management System*
Description: Built a Django-based full-stack web application enabling scheduled food pre-orders with selectable pickup times and role-based authentication.
Technologies Used: Django, PostgreSQL, Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn
Impact/Achievements: Implemented a slot-based order management system with capacity validation to prevent overbooking and improve crowd management efficiency. Performed data analysis on historical order records to identify peak purchasing hours and customer demand patterns. Built a machine learning–based demand prediction model to forecast order frequency and optimize time-slot availability, enabling better resource planning and improved user experience.
Demo/Code Link: https://github.com/yogita-0204/foodR

Project Title: *Adidas Sales Analysis*
Description: Developed an interactive Power BI dashboard analyzing Adidas US sales data (2020–2021).
Technologies Used: Power BI, Power Query, DAX, Excel.
Impact/Achievements: Developed interactive dashboards to analyze revenue, profit, products, retailers, and regional sales performance, providing clear business insights. Performed data cleaning, preprocessing, and feature engineering, and calculated key performance indicators (KPIs) such as profit margin and year-over-year (YoY) growth to support data-driven decision making.

Certifications

Privacy and Security in Online Social Media: NPTEL (Oct 2025)
Machine Learning for All: Coursera (Feb 2024)
Responsive Web Design: freeCodeCamp (Oct 2023)

Achievements

Patent: Temperature-Sensitive Smart Car Seat Cover with Automated Heating & Cooling (May 2025)

- Co-inventor of a patented smart car seat cover using **PCM material, sensors, and ESP32**.
- Provides automatic heating and cooling with **mobile app control**.

AI Recommendations for Improvement

Recommendation 1: Improve DSA by regularly solving coding problems on platforms like LeetCode.
Recommendation 2: Complete an industry-recognized certification in Machine Learning or Data Science.

Self-Assigned Tasks (Till 10th week of this semester)

Task 1: Strengthen problem-solving skills by practicing Data Structures and Algorithms, targeting 150+ problems on LeetCode, focusing on arrays, binary search, recursion, and trees.

Targets Allocated (Till 10th week of this semester)

Targets Approved by Course Instructor

- Complete certification in Machine Learning
-
-
